

GABRIEL ZABHYDE SHINJI OGURA

BACKEND DEVELOPER

Working on API development and business logic, with experience as a freelancer in web application development. I handle backend and frontend integration, working with data processing and dynamic data display. I use technologies such as **Python, React, HTML, CSS, JavaScript, Django, Flask, PostgreSQL, Docker, Java, Spring Boot, TypeScript, Supabase.**

EXPERIENCE

Freelancer, Barbacena
Backend Developer

Project: **Stock Tracker**([Project](#))

- Fullstack web system for operational management that centralizes product registration, stock movements, sales and employee management in a single interface — eliminating manual spreadsheet control. Features a real-time metrics dashboard showing sales volume, revenue and average ticket for the current month compared to the previous month, role-based access control and JWT authentication with automatic session expiration.
- **Technologies:** Python, Flask, PostgreSQL, React, Vite, Axios, JWT, CSS3
